

THE HUNTER RIVER 2019

A precious water resource for
the Upper Hunter

Upper Hunter
Mining Dialogue

2019 was a drier
than average year.
That year

**214
BILLION
LITRES**

entered the river system
in the Upper Hunter.

33%

of that water stayed in
the river.

The amount of water
extracted and used by
farmers, residents and
businesses was

58%

MINING

used less than

8%

of the water in the system.

The NSW Minerals Council has compiled the data in this infographic using the best available information. Since water accounting is a complex task that relies on estimates and computer models, there are corresponding limits to the accuracy of the information.
